

FOLLOW THESE RULES BEFORE IMPORTING CSV / TSV FILE										
PLEASE DO NOT CHANGE COLUMN HEADERS										
We have 2 ways to import products which is CSV (Comma-separated values) and TSV (Tab-separated values). You can use any method to import. We have csv folder and tsv folder for sample files										
PRODUCTS (products sheet)										
1) no field should be empty including image_url										
2) please check that every hashtag entered is unique										
3) short_description should be less than 300 characters										
VARIATIONS (variations sheet)										
1) no field should be empty except for variant_1_image_url, variant_3_name, variant_3_value, variant_2_image_url, variant_3_image_url, (and variant_2_name, variant_2_value if you have only 1 level of variation)										
2) please check that product is already created and active for every hashtag entered										
3) you must enter at least 2 rows for each hashtag that means 2 variations must be there otherwise that variations will be skipped										
NOTE: Please remove example rows (if any) before importing .csv / .tsv file into panel
